Press Release

Rural Computer Consultants, Hawkins Research Extend Reach with New Partnership

September 02, 2010 – Bird Island, MN - Rural Computer Consultants Inc., is proud to announce a new partnership for Mutual Insurance Companies across the country. RCC, which has offices in Bird Island, MN and Birmingham, AL, the developer of the MIPS Policy Processing System and Hawkins Research, Inc., the developer of the PowerClaim Suite of Solutions for the Property Industry, provide effective and efficient connectivity and interfacing technology to their customers through RCC's Mutual Insurance Processing System in combination with the already international use of the PowerClaim Software Suite. This partnership will greatly benefit current and new customers from both companies.

PowerClaim XML allows contractors, insurance adjusters, and anyone working with property to create estimates, claims, and reports quickly and professionally. RCC's Mutual Insurance Processing System (MIPS) acts as a web-based hub, integrating claims, accounts payable, general ledger and payroll functions. The link between PowerClaim XML and MIPS provides a way for insurance mutuals to download claim information directly into PowerClaim XML for seamless functionality and increased work efficiency. RCC is excited to be able to add this feature for their customers and looks forward to continued advancements in the future.
